

Four Pillars Finance Newsletter

Issue #102 (5 October 2009)

The Nasdaq market moved up, as we indicated last month.
How much upside is left?
Read on below...

Here is the FPF prediction chart for the Nasdaq in 2009.
More predictions charts for other markets, stocks, indices and commodities are available to the registered users of our FPF software program:

(Predictive chart made with FPF 1.1 software, available at <http://www.fourpillars.net/finance/fpf.php>)

Nasdaq

Current level: 2048

Stocks broke higher, almost reaching our 2200 target we had set for November.
Now they have fallen back to 2050, where they sit right on their uptrend line that started in March.

FPF Index is still positive for October and November, so I think markets will try to the upside once more, but probably fail to break significantly higher.

Then decline into early next year.

With a Metal year coming up soon, I take all profits off the table and will wait for a better time to get in.

This has been a very nice run up since March, and we have come very close to reach our target for the year.

As for the short term periods prognosis we presented last month.

Below average from 23rd August till 8th September . Result: from 2020 to 2037

Above average from 8 September till 21 September. Result: from 2037 to 2138 , a nice rise of 5%.

Below average from 21 September till 8 October. Result: from 2138 to 2048 (as of Oct 2) , down 4%

So that was not bad again.

We will publish more about this on the newly created site: <http://www.LunaticTrader.com>

You can check it out already, more materials will be added in the next few weeks.

And here is our updated prediction chart for Nasdaq:

Gold

Current level for XAU index: 157

Gold stocks broke out of the triangle formation, but to the upside rather than the downside we expected. However, after quickly going to 175 it fell back equally fast to 157 as of now. If you bought at 130 in July, then I would take the profits here, because it increasingly looks like a failed breakout. A move below 150 for the XAU would likely result in a quick drop to 120. One doesn't need to be in the market all the time, and the risk-reward just doesn't look very good here.

Here is the updated chart:

Euro - US Dollar

Current level: 1.46

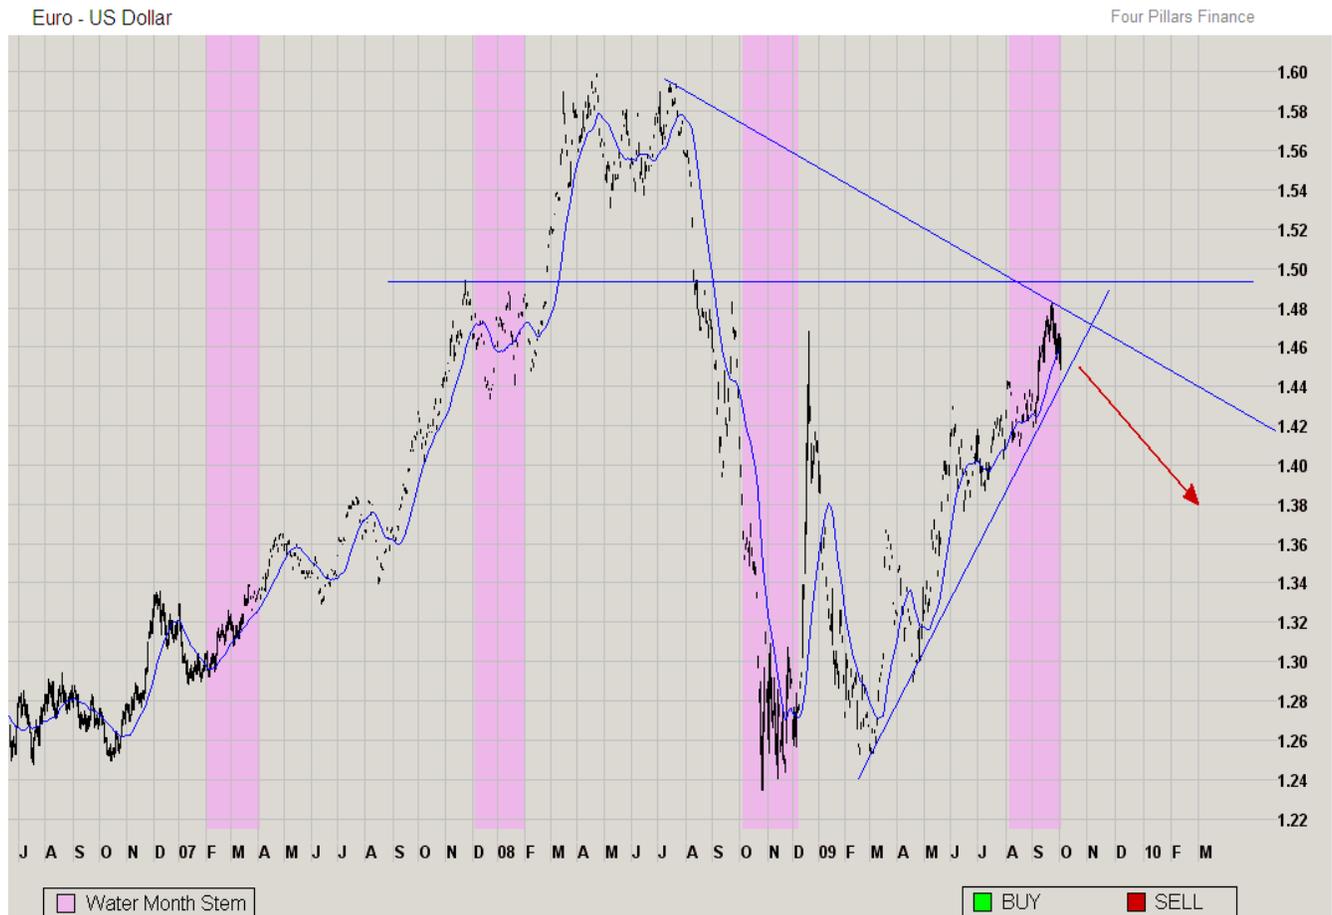

The Euro continued upwards to 1.46

Water months did not produce any decline, so I don't see a buying opportunity here.

The very steep uptrend that started last February will probably be capped at the 1.50 level (see chart)

Still staying out of this one.

Here is the prediction chart:

Crude Oil

Current level for USO: 36.0

Oil went sideways and our buy target was not reached.

I would be patient on this one as it could continue sideways well into next year.

If you want to be invested in energy I would accumulate some natural gas (UNG) right now, as it is undervalued relative to oil prices.

Here is the updated chart:

Four Pillars Finance software - Free trial download

For more detailed daily prediction charts you are welcome to download the Four Pillars Finance 1.1 software on our site : <http://www.fourpillars.net/finance/fpf.php>

The program calculates the Chinese cycles and shows you in advance the best days , months or years to buy or sell stocks, gold, bonds, currencies, commodities...

No experience in Chinese astrology is needed in order to use this program.
